Dear Advanced Microgrid Solution HR Manager:
RE: Full Stack Developer Vacancy(vacancy number 2376)

I am writing to apply for the position of Full Stack Web Developer at Advanced Microgrid Solution(AMS) advertised on LinkedIn on July 14, 2016.

I am particularly fascinated by AMS as the team behind this company is comprised of professionals with diverse backgrounds, and I am convinced that such companies have a unique capability to tackle problems from different perspectives. Apart from enjoying the tasks offered by the full stack developer position, my desire is to work for a company that is focused on developing solutions to solve real-life problems. AMS fits the bill perfectly as a leading edge energy services platform pioneering the use of behind-the-meter energy storage systems to help meet customer needs during peak energy consumption periods.

My experience with all stages of the development cycle for web project enables me to build new applications from scratch and influence system design. With 10+ years as an SQL database manager, I have the skills to build out your web-based analytics and operations platform to manage a fleet of distributed energy storage units. I enjoy solution to large, complex data problems enjoy the process of design and implementing. As result of implementation of SQL reports which I developed, total time for data analysis was reduced in 20%.

In my last position, I was part of a software implementation team. We all worked together to plan and manage the implementation schedule. I tested software and a provided the training for large group of people and also I worked individually with customers. As result new software was implemented successfully.

My resume is attached and I'd be happy to pass along a list of past projects. I can be reached any time via phone or email. Thank you for your time and consideration. I look forward to speaking with you about this opportunity.

Sincerely,
Valentyna Strelchuk
