Dear Advanced Microgrid Solution HR Manager:  
RE: Full Stack Developer Vacancy( vacancy number 2376)

I am writing to apply for the position of Full Stack Web Developer at Advanced Microgrid Solution(AMS) advertised on LinkedIn on July 17, 2016.

I am particularly fascinated by AMS as the team behind this company is comprised of professionals with diverse backgrounds, and I am convinced that such companies have a unique capability to tackle problems from different perspectives. Apart from enjoying the tasks offered by the full stack developer position, my desire is to work for a company that is focused on developing solutions to solve real-life problems. AMS fits the bill perfectly as a leading edge energy services platform pioneering the use of behind-the-meter energy storage systems to help meet customer needs during peak energy consumption periods.

My experience with all stages of the development cycle for web project enables me to build new applications from scratch and influence system design. With 10+ years as an SQL database manager, I have the skills to build out your web-based analytics and operations platform to manage a fleet of distributed energy storage units. While creating solutions to large, complex data problems process I enjoy being involved in both design and implementation stages. In my previous job as a data administrator I managed 14 SQL servers. Processing and analysis of entry data consumed a lot of time and effort from several members of my team. To address this issue I created an automated reports. As result of implementation of SQL reports which I developed, total time for data analysis was reduced in 20% and possibility of the human error was also eliminated.

In my last position, I was part of a software implementation team responsible for developing system for collecting user feedback and addressing system weak point. There was a high pressure on my department to gather feedback and train new users so that software could be approved before the deadline. My team worked together to plan and manage the implementation schedule. I tested software and provided the training for large group of people and also worked individually with customers. As result new software was implemented successfully and within the desired time-frame.

My resume is attached and I'd be happy to pass along a list of past projects. I can be reached any time via phone or email. Thank you for your time and consideration. I look forward to speaking with you about this opportunity.

Sincerely,  
Valentyna Strelchuk
